

(Fig. 2) What each native channel delivers:
elicits → contact-consistent → clears 5 cm at the fixed centre → retained

Bars: k/n with Wilson 95 % intervals; dark inner bar and [j]: clips that also passed every earlier measured stage;
grey: stage not measured for that channel; x: SONIC-retained under EXP-022A's guarded endpoint (physics seed 0, one scene, no box in Isaac).
Fixed centre: x = 1.2 m BoxHeightProbe (exp021; chosen post hoc on the same clips) · EXP-1C's own probe at x = 3.6 m ·
the predeclared per-seed obstacle (packets) · the predicted centre x = 3.11 m (delayed prompt and WALK). Kinematic stages, v2 sampler.
